3:00 – 3.30 pm

Physics conference room (Small Hall 123)

Optical Society of America: what it can do for student members?

Optical Society of America (OSA) is one of the large international organizations that bring together optics and photonics scientists, engineers, educators, technicians and business leaders. OSA offers many valuable benefits for its individual student members. It also supports a student network through student chapters that provide a valuable link to student peers and the greater OSA membership community. Chapter activities include technical programs as well as outreach to local communities and young students. OSA provides financial and programming support to each chapter.

Come to hear what OSA can do for our students from **Dr. Carlos Lopez-Mariscal**, a president of a student chapter in Tecnológico de Monterrey in Mexico. He will share his experience as an OSA student member, and he will explain why a local student chapter can be very beneficial for students, and yet be a lot of fun!
