# Outline

#### History of gravity

- Newton's laws
- Einstein's laws
- A bit of astrophysics

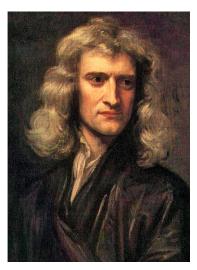

## 2 Detectors

• Gravitational wave interferometer

#### Newton's laws 1686

$$F_g = G rac{m_1 m_2}{r^2}$$

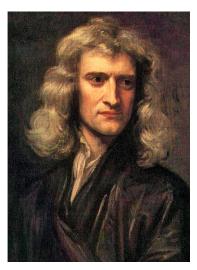

Laws of motion and law of gravitation solved problems of astronomy and terrestrial physics.

- eccentric orbits
- tides

• perturbation of moon orbit due to sun Unified the work of Galileo, Copernicus and Kepler.

Did not explained precession of Mercury orbit

#### Newton's laws 1686

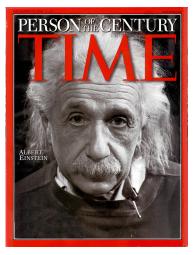

$$F_g = G rac{m_1 m_2}{r^2}$$

Laws of motion and law of gravitation solved problems of astronomy and terrestrial physics.

- eccentric orbits
- tides

• perturbation of moon orbit due to sun Unified the work of Galileo, Copernicus and Kepler.

Did not explained precession of Mercury orbit

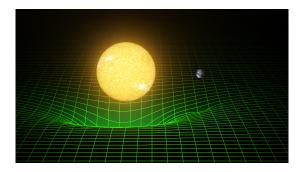

The General Theory of Relativity and theory of Gravity (1915)

- No absolute motion thus only relative motion
- Space and time are not separate thus four dimensional space-time
- Gravity is not a force acting at a distance thus warpage of space-time

# General relativity

- A geometric theory connecting matter to spacetime
- Matter tells spacetime how to curve
- Spacetime tells matter how to move

important predictions

- $\bullet\,$  Light path bends in vicinity of massive object  $\rightarrow$  confirmed in 1919
- Gravitational radiation (waves)  $\rightarrow$  confirmed indirectly in 1974

Eugeniy Mikhailov (W&M)

LIGO and GW

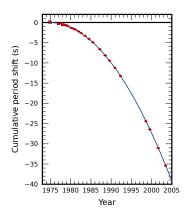

# Indirect observation of gravitational wave

Emission of gravitational radiation from pulsar PSR1913+16 leads to loss of orbital energy.

- orbital period decreased by 36 sec from 1975 to 2005
- measured to 50 ms accuracy
- deviation grows quadratically with time

This can be explained by general relativistic effects: J.H. Taylor and J.M. Weisberg, Astrophysical Journal, Part 1, vol. 253, Feb. 15, 1982, p. 908-920.

Nobel prize in 1993 to Hulse and Taylor

#### Coalescing compact binaries

- objects: NS-NS, BH-NS, BH-BH
- physics regimes: Inspiral, merger, ringdown

 spinning neutron stars (pulsars)

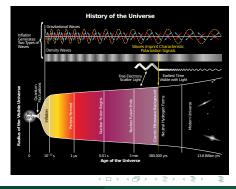

# Astrophysical sources of GW (cont)

- Burst events
  - Supernovae with asymmetric collapse

- Stochastic background
  - right after Big Bang  $(t = 10^{-43} \text{ sec})$
  - continuum of sources

# Astrophysics with GWs vs. E&M

E&M (photons)

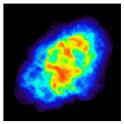

- Space as medium for field
- Accelerating charge
- Absorbed, scattered, dispersed by matter
- 10 MHz and up
- Light = not dark (but >95% of Universe is dark)

#### GW

- Spacetime itself ripples
- Accelerating aspherical mass
- Very small interaction; matter is transparent
- 10 kHz and down
- Radiated by dark mass distributions

## New view to the universe

#### Crab Nebula: Remnant of an Exploded Star (Supernova)

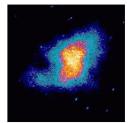

Radio wave (VLA)

Infrared radiation (Spitzer)

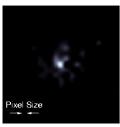

Visible light (Hubble)

Ultraviolet radiation (Astro-1)

Low-energy X-ray (Chandra)

High-energy X-ray (HEFT)

500

Eugeniy Mikhailov (W&M)

March 12, 2016 10 / 32

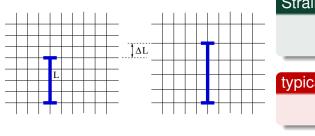

# Gravitational waves (GW)

- Predicted by the General Theory of Relativity
- Generated by aspherical mass distribution
- Induce space-time ripples which propagate with speed of light

New tool for astrophysics

GW stretch and squeeze space-time thus move freely floating objects

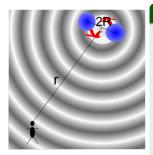

Strain - strength of GW
$$h = \frac{\Delta L}{L}$$
(1)

typical strain  

$$h \sim 10^{-21}$$
 (2)  
 $(2)$   
March 12, 2016 11/32

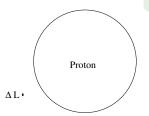

Eugeniy Mikhailov (W&M)

LIGO and GW

#### Two neutron star

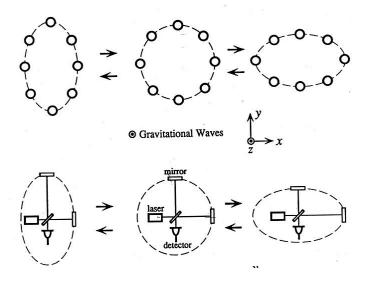

with a mass of 1.4 solar masses each orbiting each other with a frequency f = 400 Hz at a distance 2R = 20 km would generate strain  $h \sim 10^{-21}$ at distance equal to  $10^{23}$  m (distance to the Virgo cluster) For 4 km base line that would correspond to  $\Delta L$  thousand times smaller than size of proton.

Detection of GW is difficult problem

## Interferometric Measurement

э

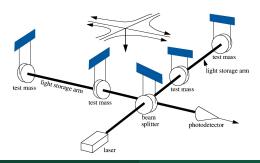

イロト イポト イヨト イヨト

# Laser Interferometer Gravitational-wave Observatory

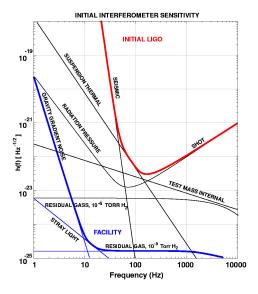

- *L* = 4 km
- $h \sim 2 \times 10^{-23}$
- $\Delta L \sim 10^{-20} \text{ m}$

# Initial LIGO sensitivity goal and noise budget

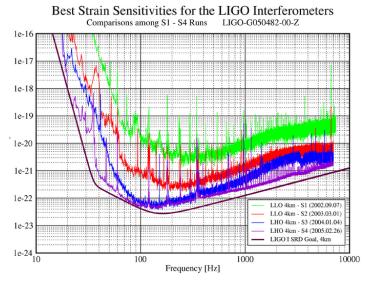

Displacement noise

- seismic
- thermal suspension
- thermal Brownian
- radiation pressure noise
- Detection noise
  - electronics
  - shot noise
