## Heisenberg uncertainty principle

#### **Optics** equivalent

#### $\Delta \phi \Delta N \geq 1$

The more precisely the PHASE is determined, the less precisely the AMPLITUDE is known, and vice versa

#### Optics equivalent strict definition

 $\left< \Delta X_1^2 \right> \left< \Delta X_2^2 \right> \ge 1$ 

$$X_1 = rac{a+a^\dagger}{\sqrt{2}}$$
 $X_2 = rac{a-a^\dagger}{\sqrt{2}i}$ 

#### Coherent states of light

#### unsqueezed

#### amplitude-squeezed

phase-squeezed

angle-squeezed

Storage and retrieval

- single photon
- squeezed state (Furusawa and Lvovsky PRL 100 2008)

Squeezed state requirements for a quantum memory probe

- squeezing carrier at atomic wavelength (780nm, 795nm)
- squeezing within narrow resonance window at frequencies(<100kHz)</li>

Traditional nonlinear crystal based squeezers are capable of it, but they are extremely technically challenging especially at short wave length.

# Self-rotation of elliptical polarization in atomic medium

A.B. Matsko et al., PRA 66, 043815 (2002): theoretically prediction of 4-6 dB noise suppression

$$a_{out} = a_{in} + \frac{igL}{2}(a_{in}^{\dagger} - a_{in})$$

Eugeniy E. Mikhailov, Irina Novikova: Optics Letters, Issue 11, 33, 1213-1215, (2008).

# Low frequency squeezing vs noise sidebands frequency in <sup>87</sup>Rb at 795 nm

<sup>87</sup>Rb cell + 5Torr Ne, T=63.3°C P=0.5 mW

Eugeniy Mikhailov (W&M)

Squeezing with Rb vapor

PQE 2011 13 / 19

#### Excess noise and the source of the controversy

#### No buffer gas near $F_g = 2 \rightarrow F_e = 2$ transition

Squeezing occurs in the rather narrow parameters space

Eugeniy Mikhailov (W&M)

Squeezing with Rb vapor

PQE 2011 14 / 19

#### MOT squeezer

#### T = 200 $\mu$ K, N = 2 $\times$ 10<sup>10</sup> 1/cm<sup>3</sup>, OD = 5, beam size = 0.1 mm

Eugeniy Mikhailov (W&M)

# Noise contrast in MOT with <sup>87</sup>Rb $F_g = 2 \rightarrow F_e = 1$

# Squeezing in MOT with <sup>87</sup>Rb $F_g = 2 \rightarrow F_e = 1$

Eugeniy Mikhailov (W&M)

PQE 2011 17 / 19

## Theoretical prediction for MOT squeezing with <sup>87</sup>Rb

 $F_g = 2 \rightarrow F_e = 1, 2$  high optical density is very important

Eugeniy Mikhailov (W&M)

Squeezing with Rb vapor

PQE 2011 18 / 19

- Self-rotation based squeezing is possible in hot and ultra-cold <sup>87</sup>Rb vapor
- Squeezing is generated in the range from 10 kHz to several MHz
- Such vacuum squeezing is suitable for atomic quantum memory tests
- Advantages of the PSR squeezing
  - Requires very little optical power (< 100 mW)
  - Generated at atomic transition wavelength
  - Potentially can be generated at any wavelength where the suitable transition exists
    - think blue or even ultraviolet
