Dear Colleagues,

The Institute for Health Metrics and Evaluation at the University of Washington is announcing its Post-Bachelor Fellowship Program. The program aims to attract seniors and recent graduates with a serious interest in global health and strong quantitative skills.

The Fellowship does not require any background or experience in global health. In fact, we particularly welcome applications from students in fields such as Physics, Math, Computer Science, Engineering, as well as the Social Sciences, who are interested in applying their skills to the complex challenges in global health metrics.

A more detailed description of the program and information about the application process are attached to this message. It would be greatly appreciated, if you would circulate it to potentially interested students.

Please do not hesitate to contact me with questions.

Sincerely,

Emmanuela Gakidou

Emmanuela Gakidou, PhD
Associate Professor, Department of Global Health
Director of Education & Training, Institute for Health Metrics & Evaluation
University of Washington
